Computer Networks for Engineers

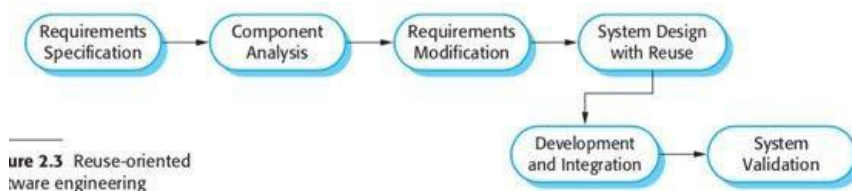

Section 01

Assignment 2

Professor Rawlins

19 May 2025

### Integration and Configuration Model

1. Component Analysis: The real version of Leopard Web is one of the best places to get the information from this project for.
2. Requirement Modification: We will take the components we make and see how we can use them to satisfy the needs of the user (someone using Leopard Web).
3. System Design with Reuse: This is where we will start using the components we made for the system, modifying them as we go.
4. Development and Integration: Continue to edit the system and continue to update it with our new changes as we go.
5. System Validation: Test every action that a student, instructor, and administrator can take while using the Leopard Web.
