

# Assignment 2: Integration And Configuration

ELEC 3225 – Applied Programming Concepts  
(Summer 2025)

Harljen Hill

Section 01

5/19/2025

1. By following the integration and configuration Model, I would break down the components of the project into pieces of puzzles previously solved. Most of us have worked on or know how to do a search feature, for example.
2. The model then brings us to the modification. For example, we are going to modify the search feature to either take the CRN information or the course name as input.
3. At this point in the project, we are gonna solve the puzzle with the pieces that we have. Adding and tweaking all the pieces that don't quite fit the scope of our project.
4. If, at this point in the project, something can be improved, it should be done so. If a piece is missing from the project, this phase would be the time to build it and implement it into the project.
5. At the end of the project, we are going to go through the list of demands and make sure that everything fits the criteria.
